## Introduction

2 Dilaton couplings to the SM fields

Otential Analysis

#### 4 Numerical Results

・ロト ・日下・ ・ ヨト・

## Introduction

- At last, we have Higgs boson with 125 GeV ?
- Its properties are waiting to be revealed, SM or not?
- Still, the data seem to be consistent with the SM...really?
  - $\rightarrow$  Di-Photon enhancement?
  - $\rightarrow \tau \bar{\tau}$  mode?

イロン 不聞と 不同と 不同と

## Introduction

- Alternatives to the SM?
- Dilaton as a Higgs imposter :
  - $\rightarrow$  Many models, depending on the hidden conformal sectors.
  - $\rightarrow$  Technidilaton, composite Higgs, etc. (Talks by Michio Hashimoto, Toshifumi Yamada, and Stefano Moretti.)
  - $\rightarrow$  Radion models from RS, same forms.
- Dilaton-Higgs mixing?

# Dilaton couplings to the SM fields

• Usual assumption on dilaton couplings to the SM,

$$\mathcal{L}_{\text{int}} = \frac{\chi}{f_{\chi}} T^{\mu}_{\mu}$$
$$= \frac{\chi}{f_{\chi}} \left[ \mu_{H}^{2} H^{\dagger} H + m_{W}^{2} W^{+} W^{-} + m_{Z}^{2} Z_{\mu} Z^{\mu} + \sum_{f} m_{f} \overline{f} f + \frac{\beta_{G}}{g_{G}} G_{\mu\nu} G^{\mu\nu} \right]$$

- Similar to the SM, except for  $f_{\chi}$  instead of v.
- All-assuming the dilaton coupling to the EW sector "AFTER" EWSB.
   → Classically, Higgs mass parameter is the only scaling-violating term in the SM Lagrangian.

• Proposal : 
$$T^{\mu}_{\mu} \propto \mu^2 H^{\dagger} H$$
 + Scale Anomaly.

# Higgs+Dilaton

- Higgs can be lighter that scale symmetry breaking scale or dilaton
- Dilaton only couples to Higgs mass paramter...+ scale anomaly.
- In terms of  $\chi \equiv {\rm e}^{\phi/f_\phi},$  the Lagrangian for SM + dilaton can be written as

$$\begin{split} \mathcal{L} &= \qquad \mathcal{L}_{\mathrm{SM}}(\mu^2 = 0) + \frac{f_{\phi}^2}{2} \partial_{\mu} \chi \partial^{\mu} \chi \\ &+ \qquad \mu^2 \chi^2 H^{\dagger} H \\ &+ \qquad \log \left( \frac{\chi}{5(\chi)} \right) \left\{ \frac{\beta g_1(g_1)}{2g_1} B_{\mu\nu} B^{\mu\nu} + \frac{\beta g_2(g_2)}{2g_2} W^i_{\mu\nu} W^{i\mu\nu} + \frac{\beta g_3(g_3)}{2g_3} G^a_{\mu\nu} G^{a\mu\nu} \right\} \\ &- \qquad \log \left( \frac{\chi}{5(\chi)} \right) \left\{ \beta_u \left( \mathbf{Y}_{\mathbf{u}} \right) \bar{\partial}_L \bar{H} u_R + \beta_d \left( \mathbf{Y}_{\mathbf{u}} \right) \bar{\partial}_L H d_R + \beta_I \left( \mathbf{Y}_{\mathbf{u}} \right) \bar{I}_L H e_R + H.c. \right\} \\ &- \qquad \log \left( \frac{\chi}{5(\chi)} \right) \frac{\beta_{\lambda}(\lambda)}{4} \left( H H^{\dagger} \right)^2 \\ &- \qquad \frac{f_{\phi}^2 m_{\phi}^2}{4} \chi^4 \left\{ \log \chi - \frac{1}{4} \right\}. \end{split}$$

# Potential Analysis

#### Minimizing the extended potential generally gives

$$\langle H \rangle = (0, \nu/\sqrt{2})^T, \quad \langle \phi \rangle = \bar{\phi}.$$

• From tadpole condition for Higgs boson and dilaton,

$$\lambda v^2 = \mu^2 e^{2\frac{\phi}{t_{\phi}}},$$
  
$$\mu^2 v^2 = f_{\phi} m_{\phi}^2 \overline{\phi} e^{2\frac{\phi}{t_{\phi}}}.$$

• Similar to the singlet extended SM, but the structures are different.

## Mass Formula

#### • The Higgs-Dilaton mass matrix becomes

$$\mathcal{M}^{2}(h,\phi) = \begin{pmatrix} m_{hh}^{2} & m_{h\phi}^{2} \\ m_{\phi h}^{2} & m_{\phi\phi}^{2} \end{pmatrix} = \begin{pmatrix} 2\lambda v^{2} & -2\frac{\lambda v^{3}}{l_{\phi}} e^{-2\frac{\tilde{\phi}}{l_{\phi}}} \\ -2\frac{\lambda v^{3}}{l_{\phi}} e^{-2\frac{\tilde{\phi}}{l_{\phi}}} & m_{\phi}^{2} e^{\frac{\tilde{\phi}}{l_{\phi}}} \begin{pmatrix} 1 + 2\frac{\tilde{\phi}}{l_{\phi}} \end{pmatrix} \end{pmatrix} \equiv \begin{pmatrix} m_{h}^{2} & -m_{h}^{2} \frac{v}{l_{\phi}} e^{-2\frac{\tilde{\phi}}{l_{\phi}}} \\ -m_{h}^{2} \frac{v}{l_{\phi}} e^{-2\frac{\tilde{\phi}}{l_{\phi}}} & m_{\phi}^{2} e^{\frac{\tilde{\phi}}{l_{\phi}}} \end{pmatrix}$$

where

$$\tilde{m}_{\phi}^2 = m_{\phi}^2 \left(1 + 2 \frac{\bar{\phi}}{f_{\phi}}\right).$$

• Mass eigenvalues and mixing angle :

$$m_{H_{1,2}}^{2} = \frac{m_{h}^{2} + \tilde{m}_{\phi}^{2} e^{2\frac{\tilde{\phi}}{f_{\phi}}}}{2} \mp \sqrt{\left(m_{h}^{2} - \tilde{m}_{\phi}^{2} e^{2\frac{\tilde{\phi}}{f_{\phi}}}\right)^{2} + 4e^{-4\frac{\tilde{\phi}}{f_{\phi}}} \frac{v^{2}}{t_{\phi}^{2}}m_{h}^{4}}}{2}$$

with

$$\tan \alpha = \frac{-m_h^2 \frac{v}{f_\phi} e^{-2\frac{\phi}{f_\phi}}}{\frac{2\phi}{\tilde{f}_\phi} e^{\frac{2\phi}{f_\phi}} - m_{H_1}^2}$$

▲□▶ ▲圖▶ ▲温▶ ▲温≯

$$\mathcal{L}(f,\bar{f},H_{i=1,2}) = -\frac{m_f}{v}\bar{f}fh = -\frac{m_f}{v}\bar{f}f(H_1c_\alpha + H_2s_\alpha) \quad cf. \quad -\frac{v}{f_\phi}\frac{\beta_f}{y_f}\frac{m_f}{v}\bar{f}f\phi e^{-\bar{\phi}/f_\phi}$$

$$\mathcal{L}(g, g, H_{i=1,2}) \quad = \quad \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} \phi = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{2g_{3}} G_{\mu\nu} G^{\mu\nu} (-H_{1}s_{\alpha} + H_{2}c_{\alpha}) = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{f_{\phi}} = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{f_{\phi}} = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \; \frac{\beta_{3}(g_{3})}{f_{\phi}} = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} = \frac{\mathrm{e}^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} = \frac{\mathrm{e}^{-\bar{\phi}/f_$$

$$\mathcal{L}(W, W, H_{i=1,2}) = \frac{2m_W^2}{v} W_{\mu}^+ W^{-\mu} h + \frac{e^{-\bar{\phi}/f_{\phi}}}{f_{\phi}} \frac{\beta_2(g_2)}{2g_2} W_{\mu\nu} W^{\mu\nu} \phi$$

$$= \frac{2m_W^2}{v}W_{\mu}^+W^{-\mu}(H_1c_{\alpha}+H_2s_{\alpha}) + \frac{e^{-\phi/f_{\phi}}}{f_{\phi}}\frac{\beta_2(g_2)}{2g_2}W_{\mu\nu}W^{\mu\nu}(-H_1s_{\alpha}+H_2c_{\alpha})$$

## Summary and Prospects

- We consider the "minimal" Higgs-Dilaton mixing scenario.
- Consistent with the data until now.
- Generically, enhancement on the *gg* initiated process and mixing angle suppression for other process.
- If things are going well.....
  - Heavy Higgs phenomenology...?
  - Higgs pair production...?
  - EW precision test...?
- Let's wait and see!

## Advertisment

## 19th Summer Institute 2013, Mt Jiri, Korea, Aug. 17-23

The Summer Institutes have been held every summer since 1995. It aims at an Aspen-type Institute in Asia. The purpose of the Summer Institute is to promote communications and discussions on research among participants, rather than to give pedagogical lectures for students. Therefore the scientific program is relaxed to keep enough time for discussions. We hope that the new ideas and research activities will be initiated from this institute.
